

PREOPERATIVE BLEEDING RISK ASSESSMENT

Free elearning course for healthcare professionals caring for patients undergoing elective surgery.

Aims

One of the core principles of patient blood management is to optimise haemostasis and minimise blood loss. Identifying a patient's risk of bleeding preoperatively is an integral step in developing a blood management plan to minimise blood loss.

This course focuses on bleeding risk assessment for patients undergoing elective surgical procedures including:

- the risk and possible extent of blood loss related to the procedure
- patient and family history of abnormal bleeding

- preoperative identification of disorders that may affect haemostasis
- medication history.

Assessment & CPD

Includes online assessment, and a certificate for continuing professional development (CPD).

Content

The course is based on Patient Blood Management Guidelines: Module 2 Perioperative, the Preoperative Bleeding Risk Assessment and Intervention Resource: Guidance for Australian Health Providers and includes evidence-based recommendations, practice points and expert opinions.
